Hi Steve,

I'm sorry (again) for not getting back to you sooner. Thank you for checking the site for marsh elder. I would agree that the salt marsh community is nonexistent, and the wrack-line zone sometimes occupied by the marsh elder is pretty minimal here. With the high, eroded banks, there just isn't much available habitat at this site. Since there is no marsh elder (*Iva frutescens*) within the project area, I have no further concerns. Thank you for coordinating with NHB.

Thank you,  
Amy

Amy,

I feel like we have email correspondence daily lately!

I am writing in regards to the above referenced NHB file and subject parcel.

This project requires a DES permit for a proposed docking structure. Attached is a plan and photos for your use. I filed the DES application today.

I have performed numerous surveys for marsh elder (mostly in New Castle) and I did not see any on this site. As you can see from the photos, there isn't any high salt marsh community associated with the site.

Let me know if you need any more information in regards to this file.

Thanks,
